

2nd Congress for Frequency and Regulatory Medicine in Munich, Germany

20-21 July 2013

Topic Overview:

Peter Franke, *Electronics-engineer for medical devices, gives trainings and seminars, medical product advisor, CEO of Medi-Gen Technology Ltd.*

Topic: **The electricity of the human body - Healing and dangers of electromagnetic waves.**

All functions of the human body are controlled electrically, e.g. the heartbeat, nerves, brain waves, etc. Even chemical reactions are electrical processes caused by electrically charged particles such as protons and electrons. Due to the effects of electromagnetic waves on people, both the advantages of energy medicine and the dangers of electrosmog are presented, which have until now, rarely been discussed in this context.

Dr. med. Stephan Rastocny, *Licensed to practice medicine in Germany since 1987. Approved exam as specialist OB/GYN at gynaecological hospital, Giessen. Passed the Canadian and Chilean medical exams. Medical activities in various clinics, including as a senior attending physician, as well as in medical practices in Germany and Chile.*

Topic: **Parasites - acute and chronic health hazards.**

The importance of disease-causing parasites is underestimated by both laymen and therapists. Within conventional medicine, parasites are considered rare exotics. With precise testing and treatment, it has been found that the causes of many acute and chronic diseases are either purely parasitic, or at least found as an accompanying infection. Parasitic infections are neither a myth nor an unsolvable problem. The results of nine-years of clinical-therapeutic research, during the treatment of parasites in a biophysical practice, will be presented.

Topic: **Therapy with special frequencies to target specific bacteria and tumour cells**

A newly developed and innovative treatment approach with specific frequencies is introduced and presented using clinical individual case studies.

Dr. Heinz Reinwald, *Entrepreneur and non-medical practitioner with practices in West Munich and Bayreuth, partner network, developing his own metabolic program on the basis of MAP (Dr Reinwald metabolic regulation).*

Topic: **The ketogenic diet with MAP (Master Amino Acid Pattern) in hepatic encephalopathy and seizures**

In the 1920s, the ketogenic diet was the treatment of choice for seizure sufferers, before it was replaced by easier-to-use pharmaceuticals. It was not until the 1990s, that this form of diet was brought back into use by dedicated nutritionists, who were looking for alternatives for the treatment of drug-resistant patients. About the same time, it was discovered that this form of very low-carbohydrate diet, leads to very good results in cancer therapy. What has been ignored to date, however, is the discovery of the Master Amino Acid Pattern, an amino acid pattern that produces virtually no nitrogen waste in its utilization. This opens up possibilities in the treatment of seizures, hepatic encephalopathy as well as in carcinogenic processes allowing for entirely new nutrient-based therapy-accompanying measures.

Topic: **Outlook for Cancer:**

The understanding of biological laws, the combination of classical naturopathy with modern biophysical methods, such as micro-current therapy, as well as the knowledge of resistance mechanisms of tumour cells and other immunological events, as well as recent research findings from quantum physics, embryology and nutritional medicine, offer effective diagnostic and therapeutic approaches for the holistic medicine of tomorrow.

This therapy method moves back into focus, that which has long been regarded as outdated and speculative. In particular, the recent award of the Nobel Prize for Medicine to cell biologists Gurdon and Yamanaka for research into differentiation and re-differentiation of cells, shows that even after decades of dogma in conventional medicine, such as the one where stem cells develop into tissue cells, have to be redefined. The dogma of the linearity for developments in biological systems, gives way to the realization of thinking in cycles, as have long been shown by Laozi and Enderlein to be the centre-point of biological processes, although vehemently opposed. "Back to the beginning," it said in the headlines. Therefore, the current development in stem cell research and immunology provides new opportunities for cooperation.

Knut Henning, *EAV consultant since 1988, seminar lecturer for EAV as well as technical advisor and partner of IMGAEV (International Medical Society for Electro-acupuncture according to Voll).*

Topic: **Intolerances / allergies from a systemic point of view**

A faster intolerance test, for use in the daily practice, uses the bioenergetic system for diagnostics (EAV = Electro acupuncture according to Voll). There will be an explanation of the measurement points used to test for allergies and the ability to test for allergens. Can the conceptual model of energetic system circuits be used to prevent allergies and is a long-term success possible with chronically ill patients?

Topic: **Parasites as a cause of systemic immune disease under consideration of the causal chain: colon, lung.**

A testing strategy will be presented, naming the measurement points and the test substances required for bioenergetic system diagnostics (EAV). It will be shown how it is technically possible to measure and determine whether a chronic skin disease is symptomatic or causal reasons are present. The concept idea, using medical history, is based on the example of the Meridian vascular circulation.

Peter Schmalzl, *Training in microbiology, psychosomatic energetics, international experience in the Netherlands / France. Specialised in treatment of Borrelia. Advisor for therapists and doctors in the field of alternative medicine and frequency therapy.*

Topic: **Mucus-impaired fluid metabolism caused by Firmicutes in the intestines**

In traditional Chinese medicine, phlegm is considered as an important and common cause of various diseases. Mucus is always, for differing reasons, the result of a misadjusted fluid metabolism. The latest research results in frequency therapy are presented with new treatment programs.

Topic: **Psychosomatic - with its polarity and the 4 elements**

Diagnostic healing is the ethereal life force that is transformed into fine and coarse material. Differing body characters give reason to treat, e.g. body shape, skin colour, eye colour, pulse diagnosis soft or hard. Urine and skin colour etc. are added together to form an overall picture.

Topic: **Neurotransmitters - brain nerves and the relationship to addictions**

A lack of physical processing of stimuli, leads to them "taking full effect" and "affecting the psyche in an uncontrolled way", which is then completely overwhelmed and starts looking for "escape routes." This often expresses itself, in the social environment, as completely incomprehensible behaviour and this phenomenon is partially comparable with those of physical withdrawal or even with mental disorders.

This behaviour usually continues until the body's production and release of these neurotransmitters are working again in a balanced way and adequate supply of them is reinstated. The speaker shows a new development in frequency therapy.

Florian Schilling, *Non-medical practitioner in private practice since 2006. Attended many professional training courses in the areas of TCM, detoxification therapy, tumour therapy, redox and acid-base regulation. Lecturer at the Paracelsus School of Munich and director of the Institute for Nonlinear System Analysis INLSA.*

Topic: **Characteristics of the tumour cell metabolism - preventive, diagnostic and therapeutic approaches**

According to the Warburg - hypothesis, tumour cells have typical metabolic characteristics. These can be determined by simple laboratory methods. Thus individual risk profiles can be created both in terms of primary disease and recurrence and therapeutic measures are adjusted accordingly. At the same time, this typical form of tumour cell metabolism offers several promising approaches in biological tumour therapy. The aim of the lecture is to give an overview of the current capabilities and development goals.

Micro-current therapy offers, via the stimulation of mitochondrial ATP - synthesis, valuable opportunities for parallel restoration of mitochondrial disease often present in tumour patients. Beyond tumour reduction itself, this approach offers the possibility to get out of the chronic fermentation metabolism (Warburg) and back into the physiological aerobic cellular metabolism.
